

BUSINESS CHARTS PORTFOLIO

Every Visualization From the Customer Sales Performance Analysis

Data Analysis with Python · Internship Task 2 · Sumerix Global

12 charts · line, multi-line, bar, horizontal bar, histogram, box plot, heatmap, scatter, pair plot, count plot & pie

Report date: 19 August 2026

CONTENTS

01. Monthly Revenue Trend — LINE CHART
02. Revenue vs Profit Trend — MULTI-LINE CHART
03. Revenue by Category — BAR CHART
04. Top 10 Customers by Revenue — HORIZONTAL BAR CHART
05. Order Revenue Distribution — HISTOGRAM
06. Revenue Spread by Category — BOX PLOT
07. Revenue Heatmap: Category × Region — HEATMAP
08. Quantity vs Revenue — SCATTER PLOT
09. Quantity, Price, Revenue & Profit Relationships — PAIR PLOT
10. Order Count by Region — COUNT PLOT
11. Revenue Share by Region — PIE CHART
12. Customer Tier Distribution — PIE CHART

CHART 01 OF 12

Monthly Revenue Trend

LINE CHART

Tracks total revenue month over month across the full dataset window, making it easy to spot growth, seasonality, and any unusual spikes or dips at a glance.

CHART 02 OF 12

Revenue vs Profit Trend

MULTI-LINE CHART

Overlays revenue and profit on the same timeline so margin behavior — whether profit is keeping pace with revenue or falling behind — is visible month by month.

CHART 03 OF 12

Revenue by Category

BAR CHART

Ranks the five product categories by total revenue, immediately surfacing which product lines are carrying the business.

CHART 04 OF 12

Top 10 Customers by Revenue

HORIZONTAL BAR CHART

Lists the ten highest lifetime-revenue customers. The horizontal layout keeps long customer names readable while ranking them by contribution.

CHART 05 OF 12

Order Revenue Distribution

HISTOGRAM

Shows how individual order values are distributed. A right-skewed shape here means most orders are modest in size with a smaller number of large, high-value transactions.

CHART 06 OF 12

Revenue Spread by Category

BOX PLOT

Compares the full revenue distribution — median, quartiles, and outliers — within each category, revealing consistency or volatility that a simple average would hide.

CHART 07 OF 12

Revenue Heatmap: Category × Region

HEATMAP

Cross-tabulates revenue by category and region in a single view, making it fast to spot which product-region combinations are the strongest and weakest.

CHART 08 OF 12

Quantity vs Revenue

SCATTER PLOT

Plots order quantity against revenue, colored by category, to explore whether larger orders reliably translate into proportionally higher revenue across product lines.

CHART 09 OF 12

Quantity, Price, Revenue & Profit Relationships

PAIR PLOT

09. Pair Plot — Quantity, Price, Revenue, Profit

A grid of every pairwise relationship between the four core numeric business features, with each variable's own distribution along the diagonal — useful for spotting correlations at a glance.

CHART 10 OF 12

Order Count by Region

COUNT PLOT

Counts the number of orders placed in each region, showing order volume independently of order value — a useful complement to the revenue-by-region view.

CHART 11 OF 12

Revenue Share by Region

PIE CHART

11. Pie Chart — Revenue Share by Region

Breaks total revenue down into each region's percentage share, giving a quick read on geographic concentration.

CHART 12 OF 12

Customer Tier Distribution

PIE CHART

12. Pie Chart — Customer Tier Distribution

Shows what fraction of the customer base falls into the High, Medium, and Low Value tiers used throughout the analysis for segmentation.
