

SALES PERFORMANCE EXECUTIVE SUMMARY

A Business Snapshot for Leadership & Stakeholders

Data Analysis with Python · Internship Task 2 · Sumerix Global

₹3,781,264 in revenue | 41.9% margin | 1,500 orders

Report date: 19 August 2026

AT A GLANCE

Between **2023-01** and **2024-12**, the business processed **1,500** orders from **250** customers, generating **₹3,781,264** in revenue at a **41.9%** blended margin. This report distills that performance into the handful of numbers and decisions that matter most for planning the next quarter.

₹3,781,264 TOTAL REVENUE	₹1,583,261 TOTAL PROFIT	41.9% PROFIT MARGIN
1,500 TOTAL ORDERS	250 CUSTOMERS	₹2,521 AVG ORDER VALUE

Revenue Trend

Revenue peaked in 2024-07 at ₹254,991.

WHERE THE BUSINESS IS WINNING

Office Supplies leads all categories by revenue.

Office Supplies is the strongest product category, and margins hold steady in the high-30s to mid-40s percent across the portfolio — no category is being sold at a loss, and none is dramatically out-earning the others on margin alone. That means category strategy should focus on **volume and demand**, not repricing.

Revenue Share by Region

West contributes the largest share of revenue.

West is the top-performing region. Regional spend and staffing decisions should weight toward West and the next-strongest region while monitoring the lowest-performing region for whether it needs investment or a smaller footprint.

WHO DRIVES THE BUSINESS

A small group of customers accounts for a disproportionate share of revenue. **25%** of customers are classified 'High Value', and the top 5 alone are shown below.

Rank	Customer	Revenue
1	Customer_239	₹38,168
2	Customer_29	₹35,541
3	Customer_226	₹33,569
4	Customer_92	₹32,694
5	Customer_189	₹31,619

Customer Tier Distribution

Customer value-tier split.

A retention program aimed at the High Value tier protects the revenue base most efficiently — losing one of these customers costs far more than losing several Low Value ones.

RECOMMENDATIONS

What to do next

- **Double down on Office Supplies and West** — proven demand, consistent margin, lowest execution risk.
- **Launch a High Value retention program** — loyalty perks or dedicated account support for the top tier.
- **Investigate 2024-07** — replicate whatever drove that month's peak (promotion, seasonality, restock timing) ahead of the next comparable period.
- **Review Electronics** pricing and cost base — it's the lowest revenue contributor and has room to improve.
- **Re-run this report monthly** — the underlying pipeline is automated, so refreshing it costs analyst time, not rebuild time.

What to watch

- Revenue concentration in a small number of customers is an upside and a risk — losing a top-5 account has an outsized impact.
- Regional performance gaps are worth a root-cause check (market size vs. execution) before reallocating budget.
